Ref. no: 072/18

Date: 13th August 2018

MINUTES OF SITE VISIT

Date and place: 10th August 2018, locations by the Kamišina river (City of Užice) and locations by the Rača river (Municipality of Bajina Bašta)

Project title: Flood Defence System in Cross-border Area Serbia - Bosnia and Herzegovina

Contract title : Works on the regulation and recovering of the river bed on the river Kamišina in Mokra Gora (Užice) and river Rača, Bajina Bašta

Publication reference: 2017/387-271/TD10

Time: locations by the Kamišina river from 13:40 to 14:40 p.m.

locations by the Rača river from 15:30 to 16:20 p.m.

Attending representatives of the project team and others:

Mr. Aleksandar Tasić, project manager

Mr. Jugoslav Jovanović, responsible designer for the Kamišina construction project

Mr. Ivan Marković, representative of the Municipality of Bajina Bašta

Mr. Vladimir Petrovic, representative of the Joint Technical Secretariat SRB-BIH

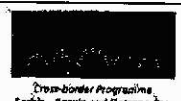

The Procurement Notice and Tender Dossier were published in the Official Gazette of the Republic of Serbia (both printed and e-version and on the web sites of the City of Užice and Municipality of Bajina Bašta on 20th July 2018.

A mandatory site visit was organized on 10th August 2018 at 13:00 p.m. at both locations - locations by the Kamišina river (LOT1) and locations by the Rača river. Representatives of 3 companies apply for the site visit all three by an e-mail. An authorized representative of the company Manco Plus Ltd. has applied for attendance, but did not show up in the locations, so 2 companies in total were present during the inspection of the future construction sites (attendance list is given as an annex 1).

Representatives of potential tenderers had several doubts regarding following issues in the Kamišina riverbed:

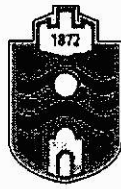

"Flood defence system in the cross-border area of Serbia and Bosnia and Herzegovina"
Project is funded by the European Union through Cross-border Cooperation Programme
Serbia-Bosnia and Herzegovina

Municipality of
Visegrad

1. Are locations by the Kamišina river accessible to large construction machines, especially in protected areas?
2. How to enter construction material in hardly accessible zones upstream?

And following questions in connection with the locations along Rača riverbed:

3. Do works include reconstruction of the upstream barrier/dam?
4. Is it necessary to demolish the existing facilities build by local residents to overcome obstacles after floods?

In accordance with the asked questions, the following responses were issued by the representatives of the Contracting Authority during the meeting:

For the river Kamišina:

Q1:	Are locations by the Kamišina river accessible to large construction machines, especially in protected areas?
R1:	The majority of locations are accessible by large construction machines e.g. tracked excavator and big truck that should carry them, except at the location Jatarice in Mokra Gora, where wheel excavator is more appropriate because location is a part of the protected area.
Q2:	How to enter construction material in hardly accessible zones upstream?
R2:	Construction material in hardly accessible zones e.g. location in Jatarice near-by tunnel above the first barrier, should be delivered manually since their quantities are not large and those works are relatively simple to perform.

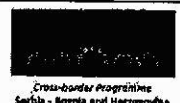

For the river Rača:

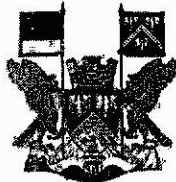

Q3:	6. Do works include reconstruction of the upstream barrier/dam?
R3:	Works will include reconstruction of the upstream barrier/dam and concrete works near the confluence, since it is not covered by the bill of quantities.
Q4:	Is it necessary to demolish the existing facilities build by local residents to overcome obstacles after floods?
R4:	The existing facilities build by local residents to overcome obstacles after floods should not be demolished, but solutions shall be proposed during the construction works in order to integrate future landscaping into the existing configuration.

All the above-mentioned dilemmas were in relation to the technical requirements and the main conclusion is that the works on the Kamisina River are much more complicated in comparison with the works on the Rača River.
